PRESERVING ARCHITECTURAL
HERITAGE

ABOUT US

Anthemion Restoration specialises in heritage building restoration — including new masonry finishes, hard landscaping, and internal stone finishes.

3

We're dedicated to preserving the character and craftsmanship of our architectural heritage. Our skilled experts blend traditional techniques with modern precision, giving us the ability to craft contemporary landmarks and meticulously restore historic ones.

Tailoring our approach to every project's unique demands, we forge partnerships, leaving our mark in building conservation and restoration.

Lee Keelan
Managing Director

Service

OUR SERVICES

Anthemion Restoration provides specialist expertise in conservation and construction.

From façade cleaning and stonework to contracting, finishes, surveys, and new build masonry, we combine traditional skills with modern management to deliver lasting quality. Our work preserves heritage while creating buildings that stand for generations.

Facade Cleaning & Restoration

Stone cleaning processes & restoration expertise: applying the most suitable, effective methods & processes via highly skilled experts.

Principal Contracting

Management expertise and superior trade skills, we provide knowledge and experience for a range of external envelope works and internal refurbishments.

Special Works & Maintenance

Specialised restoration and maintenance services: preventative, reactive and immediate response with a highly skilled team.

Internal Finishes

Expert advice on material selection and detailing for the best possible finishes and internal designs

New Build Masonry

Applying expert knowledge in traditional masonry construction and material selection, to craft modern buildings and structures.

Building Surveys

We specialise in providing customised consultancy and surveying services tailored specifically for heritage projects.

OUR EXPERIENCE

Richmond Bridge Estate, London

8

SPECIALITY

We were tasked with giving the balconies across the estate a serious refresh. After years of carbon and lichen build-up, the balcony nosings needed some expert attention.

PROJECT DURATION:

5 weeks

PROJECT VALUE:

£65,000

SPECIALITY:

Thermatech™

THE CHALLENGE

While the cleaning needed was significant, the real challenge was in the precise nature of the work. The balconies required meticulous cleaning, without causing damage to the surfaces or bringing disruption to residents.

THE SOLUTION

To carry out our work effectively, we used the Thermatech™ cleaning system. This low-pressure, high-temperature method was ideal for the delicate surfaces involved, allowing us to lift years of buildup without abrasives or harsh chemicals. Our operatives worked from both Mobile Elevating Work Platforms (MEWPs) and Rope Access positions to get complete coverage across the estate and reach all areas safely and efficiently.

THE DELIVERY

Thanks to careful planning and coordination, the project ran smoothly from start to finish. We kept in regular, open communication with both the estate office and residents, being as cooperative as possible while working within restrictions. That ongoing collaboration was key to keeping works on track and the working environment positive throughout.

THE OUTCOME

As a result, the balconies are restored and refreshed, significantly enhancing the visual appeal of the estate. The project was completed on time, with no disruption to residents, and to the full satisfaction of the estate management team.

BEFORE

AFTER

26 King Street, London

SPECIALITY

As part of our wider cleaning works, we were also tasked with restoring the façades. What started as a simple render removal revealed deeper structural issues requiring a full restoration.

PROJECT DURATION:

February 2025 –
July 2025

PROJECT VALUE:

£330,000k

SPECIALITY:

Stucco render
façade

CHALLENGES:

Following initial test and inspection of the façades, the failed render was stripped back to reveal more than just surface-level deterioration. The underlying substrate had suffered significant water damage at high level, with multiple areas of brickwork beyond repair. Many of the estate's original architectural features, including string courses, cornices, and ornate mouldings, were also missing, weathered, or structurally compromised.

The challenge was to deliver these extensive restoration works with a high level of sensitivity and attention to detail, ensuring reinstated elements matched the existing fabric both visually and structurally. All of this took place in a live environment, requiring careful management of dust, noise, and access – with open, ongoing communication with the estate office to minimise disruption throughout.

OUTCOME:

The project delivered a stronger, more structurally sound façade, fully restored with precision and care. The building was refreshed with renewed features, including a full window overhaul and detailed decoration to both windows and façades, bringing the frontage back to life. To enable open communication and a collaborative approach throughout, the client signed off each stage, allowing for the a smooth progression of works.

South Molton Street, London

SPECIALITY

A technically detailed brickwork package needed to combine restoration and new build, with a focus on quality, consistency, and respecting the building's original character.

PROJECT DURATION:

October 2024 —
present

PROJECT VALUE:

£890,000k

SPECIALITY:

Heritage
brickwork

CHALLENGES:

The main challenge was achieving a seamless brickwork match across multiple areas. Much of the original brickwork was piecemeal, so we carried out extensive sampling to ensure consistency in colour, texture, and finish. We worked closely with the main contractor, the client's team, and the Conservation Officer to agree repair methods and select the right bricks and mortar for each individual façade.

We began with detailed basement surveys to assess structural needs. Above ground, we used a range of rebuild methods to restore brickwork around existing fireplaces each with their own unique design, each with its own constraints. The new extensions added further complexity, with seven façades to tie into. Every detail – from brick type to mortar colour and pointing – had to be exact to maintain a unified appearance in keeping with the building's character.

OUTCOME:

Careful planning and specialist techniques enabled us to deliver consistent, high-quality brickwork across the project. Fireplace areas were reinstated with care, brickwork matches throughout and the new extensions tied in cleanly with the original façades, preserving the building's character and bringing the whole scheme together.

111 Wardour Street, London

SPECIALITY

stoner

Our work began with restoring and cleaning the front elevation — bringing the stonework back to life. Inside, we transformed key office spaces with fresh redecoration, breathing new energy into the building.

PROJECT DURATION:

August 2024 —
May 2025

PROJECT VALUE:

£625,000k

SPECIALITY:

Heritage stone
restoration

CHALLENGES:

The works included a Thermatech™ clean to remove years of carbon build-up from the façade, a delicate process given the building's material sensitivity and location. Following this, we replaced large areas of failed Portland Stone and brickwork, which were affected by Regent Street Disease.

We also undertook a large roofing package, installing waterproof liquid applied membranes and lead work to extend the building's lifespan. The stone masonry required precise sequencing due to the complexity of the fixing methods involved.

Working above a live, high-traffic street presented clear logistical challenges. With limited access and constant footfall, careful planning was essential to keep both the public and our teams safe while maintaining progress.

OUTCOME:

Despite access restrictions and a challenging environment, all works were delivered safely and to a high standard. The façade was restored and cleaned, giving the building a refreshed street presence, while the internal office spaces were redecorated to match — all with minimal disruption to occupiers and the surrounding area.

BEFORE

MEET THE TEAM

Our people are at the heart of Anthemion Restoration.

Lee Keelan

Managing Director

Lee brings over two decades of expertise in the restoration and conservation sector. Beginning his career as an apprentice restorer, Lee has ascended through the ranks to Managing Director and is on the path to MCI0B membership.

Tony Gagg

Estimating Director

Tony brings over two decades of expertise in restoration, priced £74m of work across landmark projects including the Theatre Royal Drury Lane, Museum of London, Manchester Town Hall, and the Palace of Westminster.

Joe Briody

Contracts Manager

Joe built expertise across joinery before moving into site management, specialising in heritage and listed buildings. His experience includes The Lancasters, and he brings an SMSTS-trained, skilled approach to restoration.

Sam Mundee

Contracts Manager

Sam has led teams on high-profile projects, combining traditional craftsmanship with strong project management. He is experienced in complex works and committed to the highest standards in conservation.

Sean Brittain

Senior Quantity Surveyor

Sean has extensive experience in cost management for heritage and construction projects. He combines financial control with a practical approach, ensuring complex schemes are delivered to budget and quality standards.

Daniel Tomlin

Junior Quantity Surveyor

Daniel supports our Senior Quantity Surveyor on the commercial management of heritage projects, assisting with cost control and project delivery while developing his surveying expertise.
